emergencies. **Explosives:** Any chemical compound, mixture or device capable of producing an

explosive-pyrotechnic effect, with substantial instantaneous release of heat and

- Gases compressed, liquefied or dissolved under pressure: Permanent gases, which cannot be liquefied at ambient temperatures; liquefied gases, which can become liquid under pressure at ambient temperatures; dissolved gases, which are dissolved under pressure in a solvent.
- Flammable liquids: Liquids, mixtures of liquids, or liquids containing solids in solution or suspension which give off a flammable vapor.
- Flammable Solids: Substances liable to spontaneous combustion. Substances which in contact with water, emit flammable gases. Solid materials which are liable to cause fire by friction, absorption of water, spontaneous chemical changes, or retained heat from manufacturing or processing, or which can be readily ignited and burn vigorously.
- Oxidizing substances and organic peroxides Solids: Though not necessarily combustible themselves, these substances may cause or contribute to combustion
- of other substances. They may also be liable to explosive decomposition, react dangerously with other substances, and be injurious to health. All oxidizing
- substances and organic peroxides are prohibited. **Toxic and infectious substances:** Substances liable to cause death or injury if swallowed or inhaled, or by skin contact. All toxic substances are prohibited.
