Getting Started: The Rate Calculator

The Aramex Shipping APIs (Application Programming Interface) allows your system to communicate directly with our shipping and tracking system over the internet. Our API provides you with wide varieties of functionalities which enable customers to integrate with Aramex's system from their own systems in an automated way. The API provides a secure channel and can be called through

encrypted HTTPS channel. This Document contains a complete guide on how to use the Rate Calculator API, which is one of the main functionalities required by customers to start shipping. The Rate Calculator determines how much the customer will get charged for the delivery from the source of the product to the final destination. The Rate Calculator API also provides these features:

- The validation of User name and Password given by the client for a more secure access, while ensuring that your customer's privacy is not violated.
- A wider range of options for customers to provide full details about their shipments, enabling Aramex to calculate rates more accurately.
- Validation of address allows the service to prompt the customer for more information in case of inaccuracy or empty fields with our Address Validation Service.
- Provides asynchronous transmission, in case the customer would like to send and receive data asynchronously. In this case, customers need to provide a transaction ID of his own choice in the request which will be passed back in the reply.
- Simple processes in which a customer can fill basic information related to shipments and system will provide the rate.

Using Rate Service Calculator: How does it work?

- The Rates Calculator uses a Web Service Definition Language (WSDL) will is provided by Aramex, enabling developers to add reference to the web service in their code. A WSDL file will be available on aramex.com or can be provided by the Aramex Electronic Data Interchange (EDI) team. [Please contact us for the WSDL](#) files.
- Once the developer adds the reference to the web service he will be able to build the request message, through the Rate Request XML, and invoke the service and get a reply message with the rates.
- The user must be registered at Aramex with a valid user name and password.
- Sample Codes will be available in both VB and C# and PHP on aramex.com.

1.Xml Structure Diagrams:

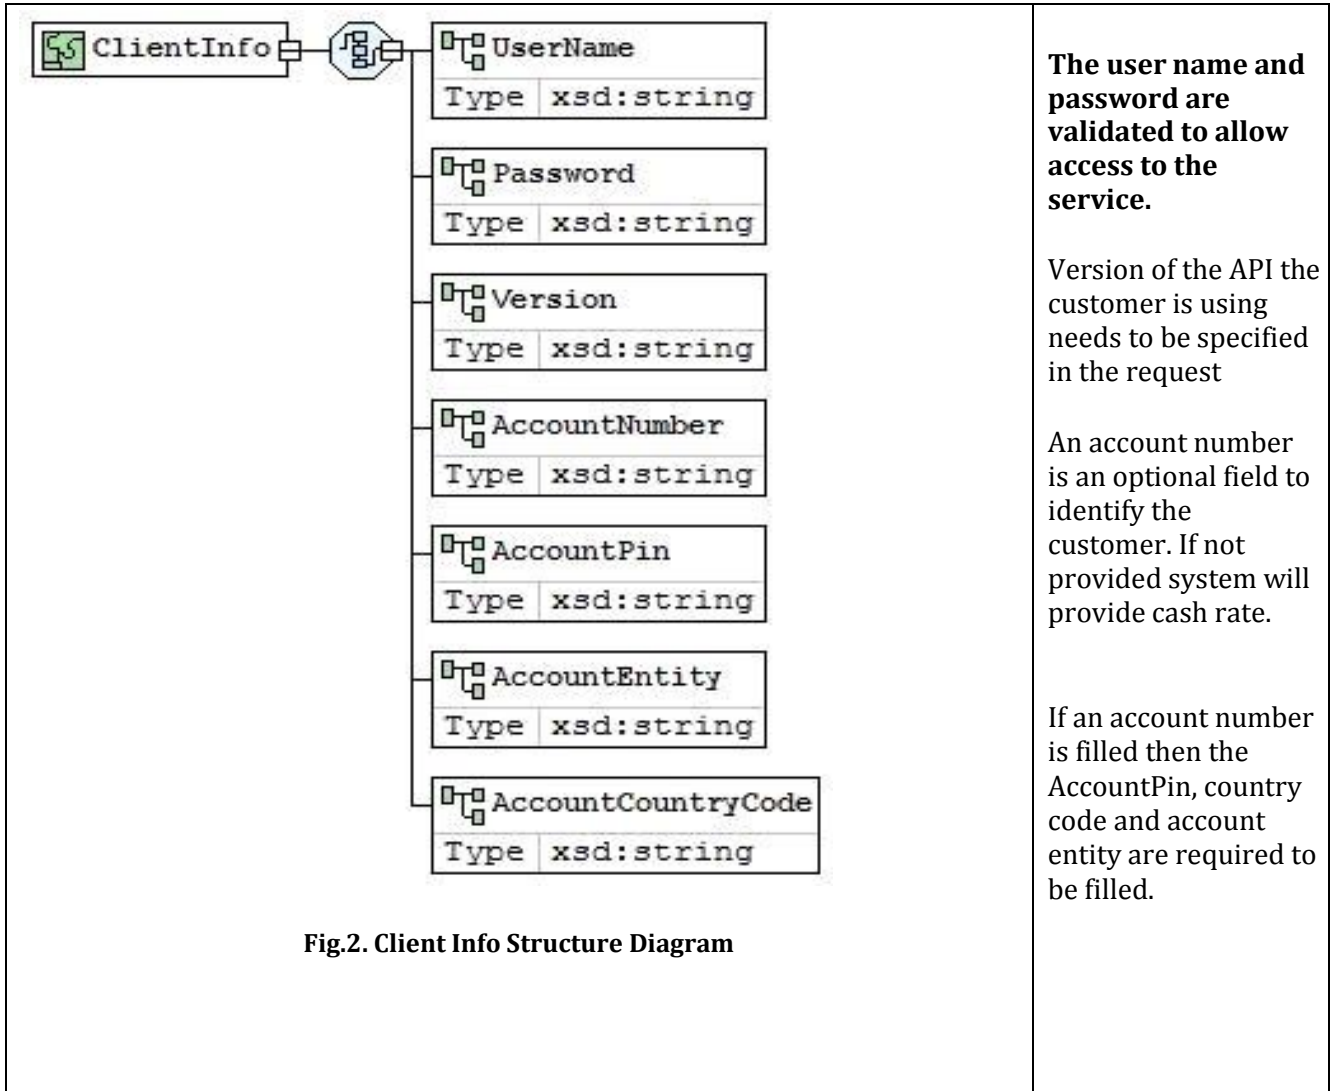

XML request or reply messages have to be constructed as explained below. The Tables below show the structure, element, child element, semantics as well as the validation conditions in a Rate Request XML.

Table 1: Rate Calculator Request Diagram and Description

Diagram	Description
<p>Fig.1. Rate Calculator Structure Request</p>	<p>Element: Client Info Purpose: - For client Validation purposes.</p> <p>Element: Transaction Purpose: For the customer to send any type of data such as identification data which will be sent back in the Reply, easier to track requests and transactions.</p> <p>Element: Origin Address Purpose: To identify the desired physical shipment origin location details and validates them to be a factor in rate calculation.</p> <p>Element: Destination Address Purpose: To identify the desired shipment Destination location details and validates them to be a factor in rate calculation.</p> <p>Element: Shipment Details Purpose: Several aspects about the shipment some required to be filled, other aspects are optional if the customer wished to include extra features.</p>

Table 2: Client Info Child Element Diagram

Diagram	Description
---------	-------------

The user name and password are validated to allow access to the service.

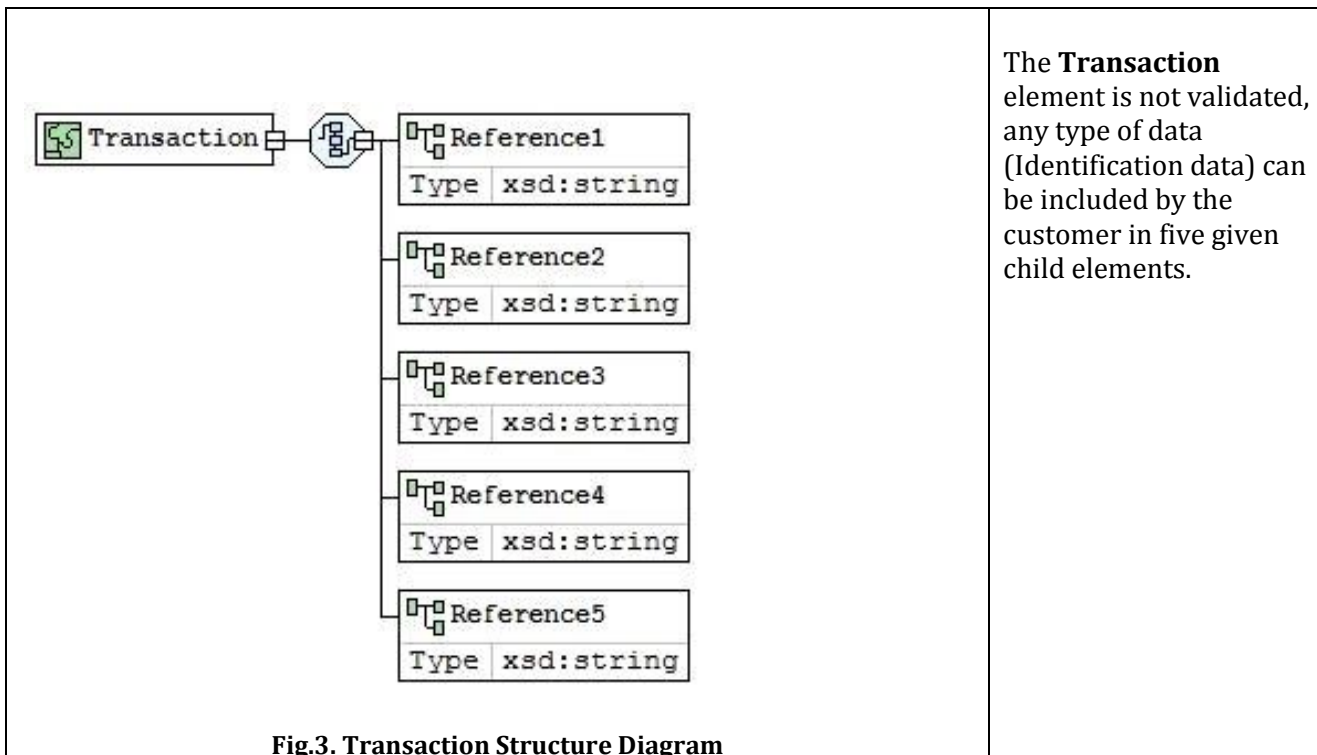

Version of the API the customer is using needs to be specified in the request

An account number is an optional field to identify the customer. If not provided system will provide cash rate.

If an account number is filled then the AccountPin, country code and account entity are required to be filled.

Table 3: Transaction, Origin and Destination Address Child Element Diagram

Diagram	Description
---------	-------------

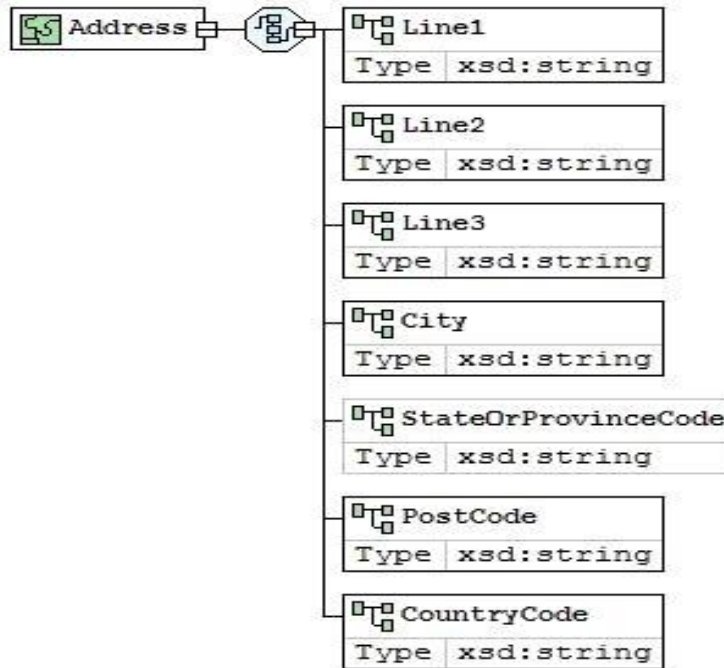

Fig.4. Transaction Structure Diagram

The **Address** Elements represent the same diagram for the Origin and Destination addresses.

Both are validated according to the Product group.

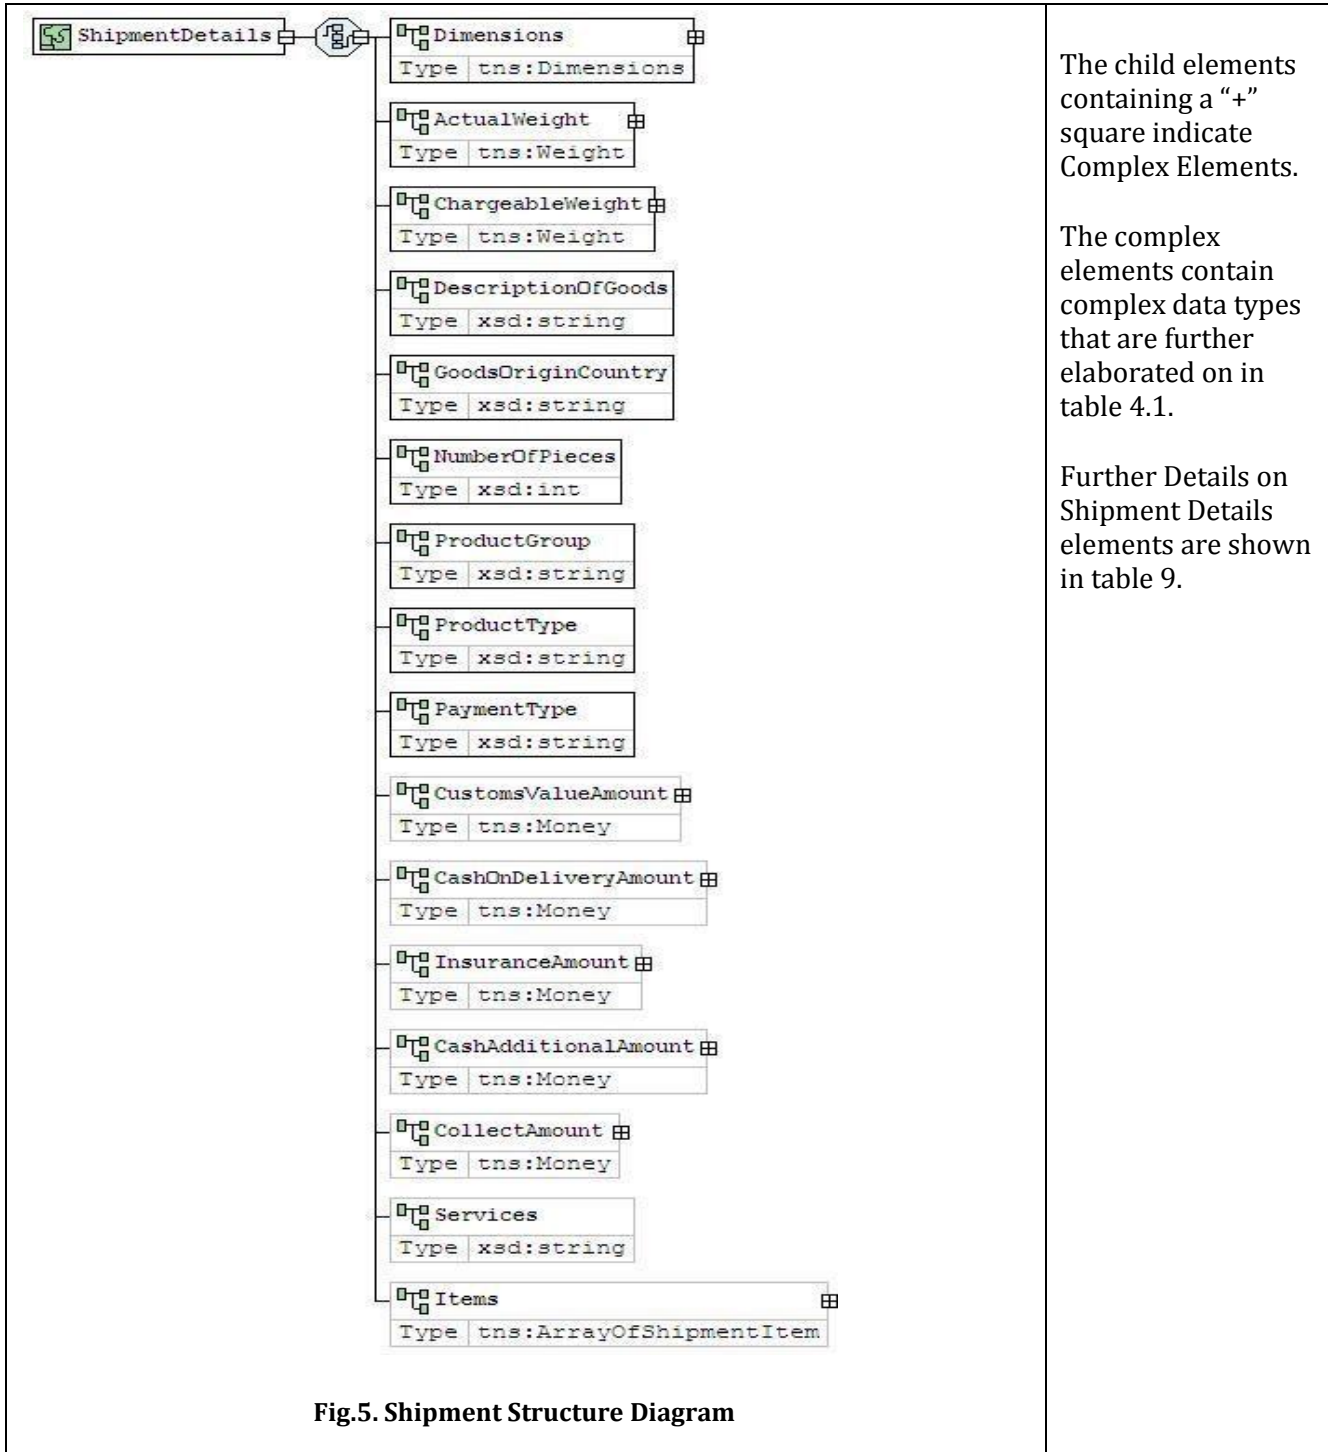

Domestic Product group (DOM) only accepts the same Country Code for Origin and Destination, as well as a valid city for this country.

International Product group (EXP) only accepts a different Country Code with valid Cities.

The Post Code, State or Province Code fields are required for countries that support them.

Table 4: Shipment Details Child Element Diagram

Diagram	Description
---------	-------------

The child elements containing a “+” square indicate Complex Elements.

The complex elements contain complex data types that are further elaborated on in table 4.1.

Further Details on Shipment Details elements are shown in table 9.

Fig.5. Shipment Structure Diagram

Table 4.1: Elaboration on Complex Elements

Diagram	Description
 <p data-bbox="462 747 818 779">Fig.6. Weight Structure Diagram</p>	<p data-bbox="1141 474 1466 709">Weight is a complex element, consisting of two child elements, Unit and Value, which apply to every element that is defined by the Data Type "Weight".</p>
 <p data-bbox="462 1146 818 1178">Fig.7. Money Structure Diagram</p>	<p data-bbox="1141 861 1466 1096">Money is a complex element, consisting of two child elements, Currency Code and Value, which apply to every element that is defined by the Data Type "Money".</p>
 <p data-bbox="420 1860 857 1892">Fig.8. Shipment Item Structure Diagram</p>	<p data-bbox="1141 1260 1466 1562">ShipmentItem is a complex element consisting of four child elements. Every Shipment can consist of several items and each item has the following: PackageType, Quantity, Weight, Comments</p>

2. Data Type Element Description

Further details on child elements of the Rate Service Calculator and their attributes can be shown below.

Element: Element Name

Data Type: The type of data that can be inserted into this field.

Required: Specifies three categories

- **M** = Mandatory, This field must be filled in all cases.
- **O** = Optional, This field may or may not be filled.
- **C** = Conditional, This field may or may not be filled depending on another field being filled.

Length: The maximum number of characters allowed in this field.

Allowed Values: Specifies the accepted data by this field.

2.1 Client Info

Table 5: Shows the list of Elements present in the Client Info Structure

Element	Data Type	Required	Length	Allowed Values	Description
User Name	Alphanumeric	M	50		A unique user name sent to the customer upon registration with http://www.aramex.com
Password	Alphanumeric	M	50		A unique password to verify the user name, sent to the client upon registration with http://www.aramex.com
Version	Alphanumeric	M	4	V1.0	Based on the WSDL the customer is using to invoke the web service
Account Entity	Character	C	3		Identification Code/Number for Transmitting Party. This code should be provided to you by Aramex.
Account Number	Alphanumeric	O	50		The Customer's Account number provided by Aramex when the contract is signed.

Account PIN	Alphanumeric	C	50		A key that is given to account customers associated with the account number, so as to validate customer identity.
Account Country Code	Character	C	2		Two Letter Code Identifying the Country. Refer to Appendix D

2.2 Transaction

Table 6: Shows the list of Elements present in the Transaction Structure

Element	Data Type	Required	Length	Allowed Values	Description
Reference 1	Alphanumeric	0	50		Any Details the Customer would like to add to be able to identify the transaction in the future.
Reference 2	Alphanumeric	0	50		Any Details the Customer would like to add to be able to identify the transaction in the future.
Reference 3	Alphanumeric	0	50		Any Details the Customer would like to add to be able to identify the transaction in the future.
Reference 4	Alphanumeric	0	50		Any Details the Customer would like to add to be able to identify the transaction in the future.
Reference 5	Alphanumeric	0	50		Any Details the Customer would like to add to be able to identify the transaction in the future.

2.3 Address

Table 17: List of Elements present in the Address Structure

Element	Data Type	Required	Length	Allowed Values	Description
Line1	String	M	50	More than 3 characters	Additional Address information, such as the building number, block, street name.
Line2	String	0	50		Additional Address information.
Line3	String	0	50		Additional Address information.

City	String	C	50		Address City. Conditional: Required if the post code is not given.
State Or Province Code	String	C	100		Address State or province code. Required if The country code and city require a State or Province Code
Post Code	String	C	30		Postal Code, if there is a postal code in the country code and city then it must be given.
Country Code	String	M	2		2-Letter Standard ISO Country Code. Refer to Appendix D for a complete list of Country codes.

2.4 Shipment Details

Table 19: list of Elements present in the Shipment Details Structure

Element	Data Type	Required	Length	Allowed Values	Description
Dimensions	Dimensions	O			Measurements required in calculating the Chargeable Weight, If any of the dimensional values are filled then the rest must be filled.
NumberOfPieces	Integer	M	3	Pieces > 0 MAX = 100	Number of shipment pieces
ActualWeight	Weight	M	6		Total actual shipment weight. If the Dimensions are filled, charging weight is compared to actual and the highest value is filled here.
Product Group	String	M	3	EXP, DOM	EXP = Express DOM = Domestic
Product Type	String	M	3	Product Type: "OND" For Product Group: "DOM"	Product Type involves the specification of certain features concerning the delivery of the product such as: Priority, Time Sensitivity, and whether it is a Document or Non-Document. Refer to Appendix A for a list of Product Types and their Product Groups

Your Guide to Embedding Aramex's Rate Calculator

Payment Type	String	M	1	P, C, 3	Method of payment for shipment. Refer to Appendix B for more details.
Payment Options	String	C	4	Payment Type = C ASCC ARCC Payment Type = P CASH ACCT PPST CRDT	Conditional - Based on the Payment Type "C" ASCC = Needs Shipper Account Number to be filled. ARCC = Needs Consignee Account Number to be filled. Optional - Based on the Payment Type "P" then it is optional to fill. CASH = Cash ACCT = Account PPST = Prepaid Stock

					CRDT = Credit
Services	String	O	25		Additional services used in shipping the package, separate by comma when selecting multiple services. Refer to Appendix C (Service Codes) for valid codes.
Description of Goods	String	M	100		The nature of shipment contents. Example: Clothes, Electronic Gadgets
Goods Origin Country	String	M	2		The origin of which the product in the shipment came from. Refer to Appendix D for a complete list of Country codes.
Customs Value amount	Money	C			Value charged by destination customs. Conditional - Based on the ProductType "Dutible"
Cash on Delivery	Money	C			Amount of Cash that is paid by the receiver of the package. Conditional - Based on the Services "COD" being filled.

Insurance Amount	Money	O			Insurance amount charged on shipment.
Cash Additional Amount	Money	O			Additional Cash that can be required for miscellaneous purposes.
Cash Additional Description	String	C			Conditional - Based on the PaymentType "3" AND Cash Additional Amount is filled
Collect Amount	Money	C			Transportation Charges to be collected from consignee. Conditional - Based on the PaymentType "C" + PaymentOptions "ARCC"
Items	<u>List(Of ShipmentItem)</u>	O			Details of the Items within a shipment. Several items can be added for a single shipment.

2.5 Date Time

Table 20: list of Elements present in the Date Time Structure

Element	Data Type	Required	Length	Allowed Values	Description
Shipping Date	Date	M			The date Aramex receives the shipment to be shipped out.
Due Date	Date	M			The date specified for shipment to be delivered to the consignee.

2.6 Shipment Items

Table 21: list of Elements present in the Shipment Item Structure

Element	Data Type	Required	Length	Allowed Values	Description
Package Type	String	C	50		Type of packaging, for example. Cans, bottles, degradable Plastic. Conditional: If any of the Item element values are filled then the rest must be filled.
Weight	Weight	C			Total Weight of the Items
Quantity	Integer	C	4	MAX = 100	Number of items

Comments	String	C	1000		Additional Comments or Information about the items
----------	--------	---	------	--	--

2.7 Attachment

Table 22: list of Elements present in the Attachment Structure

Element	Data Type	Required	Length	Allowed Values	Description
File Name	String	C			The file name without its extension.
File Extension	String	C	6		The extension of the file. Our system accepts any extension
File Contents	Byte()	C	4 MB		Contents of the file.

2.8 Label Info

Table 23: list of Elements present in the Label Info Structure

Element	Data Type	Required	Length	Allowed Values	Description
Report ID	Integer	M		9201	The Template of the report to be generated.
Report Type	String	M		"URL" or "RPT"	Either by URL or a streamed file (RPT). URL by Default

2.9 Dimensions

Table 24: list of Elements present in the Dimensions Structure

Element	Data Type	Required	Length	Allowed Values	Description
Length	Double	C	5	Format: 000.000 MAX = 100	Measurements required in calculating the Chargeable Weight, If any of the Dimensional values are filled then the rest must be filled.
Width	Double	C	5	Format: 000.000 MAX = 100	Measurements required in calculating the Chargeable Weight, If any of the Dimensional values are filled then the rest must be filled.

Height	Double	C	5	Format: 000.000 MAX = 100	Measurements required in calculating the Chargeable Weight, If any of the Dimensional values are filled then the rest must be filled
Unit	String	C	2	CM, M	Measurement Unit, If any of the Dimensional values are filled then the rest must be filled. CM = Centimeter M = Meter

2.10 Weight

Table 25: list of Elements present in the Weight Structure

Element	Data Type	Required	Length	Allowed Values	Description
Value	Double	M	6	Format: 000.000 Weight > 0 MAX = 100	Shipment weight. If the Data Entity 'Dimensions' are filled, charging weight is compared to actual and the highest value is filled here.
Unit	String	0	2	KG , LB	Unit of the weight

2.11 Money

Table 26: list of Elements present in the Money Structure

Element	Data Type	Required	Length	Allowed Values	Description
Currency Code	String	C	3		3-Letter Standard ISO Currency Code Refer to Appendix E for a list of Currency Codes. If Cash on delivery value is filled, then its currency must be in USD.
Value	Double	C	5	Format: 000.000 MAX = 100	The Monetary value. For Cash on delivery , the currency must be in USD.

2.12 Volume

Table 27: list of Elements present in the Volume Structure

Element	Data Type	Required	Length	Allowed Values	Description
Value	Double	M	6	Format: 000.000 Volume > 0 MAX = 100	Shipment Volume.
Unit	String	0	2	Cm3, Inch3	Unit of the volume

3. RESPONSE

3.1 Transaction

Table 10: Transaction Response Description

Element	Description
Reference 1	The Data entered by the customer in the Request process.
Reference 2	The Data entered by the customer in the Request process.
Reference 3	The Data entered by the customer in the Request process.
Reference 4	The Data entered by the customer in the Request process.
Reference 5	The Data entered by the customer in the Request process.

3.2 Has Errors

If there is an error while processing the data entered in a certain field, this element will notify you immediately and further details can be read in the Notification element.

Values Returned

True: An error is identified with your request data; in this case you should fix the request data which is identified for you in the Notification Message. **False:** Error Free, your request was successful.

3.3 List of Notifications

Table 11: Reply - List of Notifications

Element	Description
Code	To Identify the notification category.
Message	Deeper description of the Notification.

3.4 Total amount

Table 12: Reply-Total Amount (Calculated Rate)

Element	Description
Currency Code	If Payment Type is specified then the Currency is as follows: Prepaid = Origin Currency Collect = Destination Currency Third Party = Currency of the Customer Account
Amount	The Monetary Value

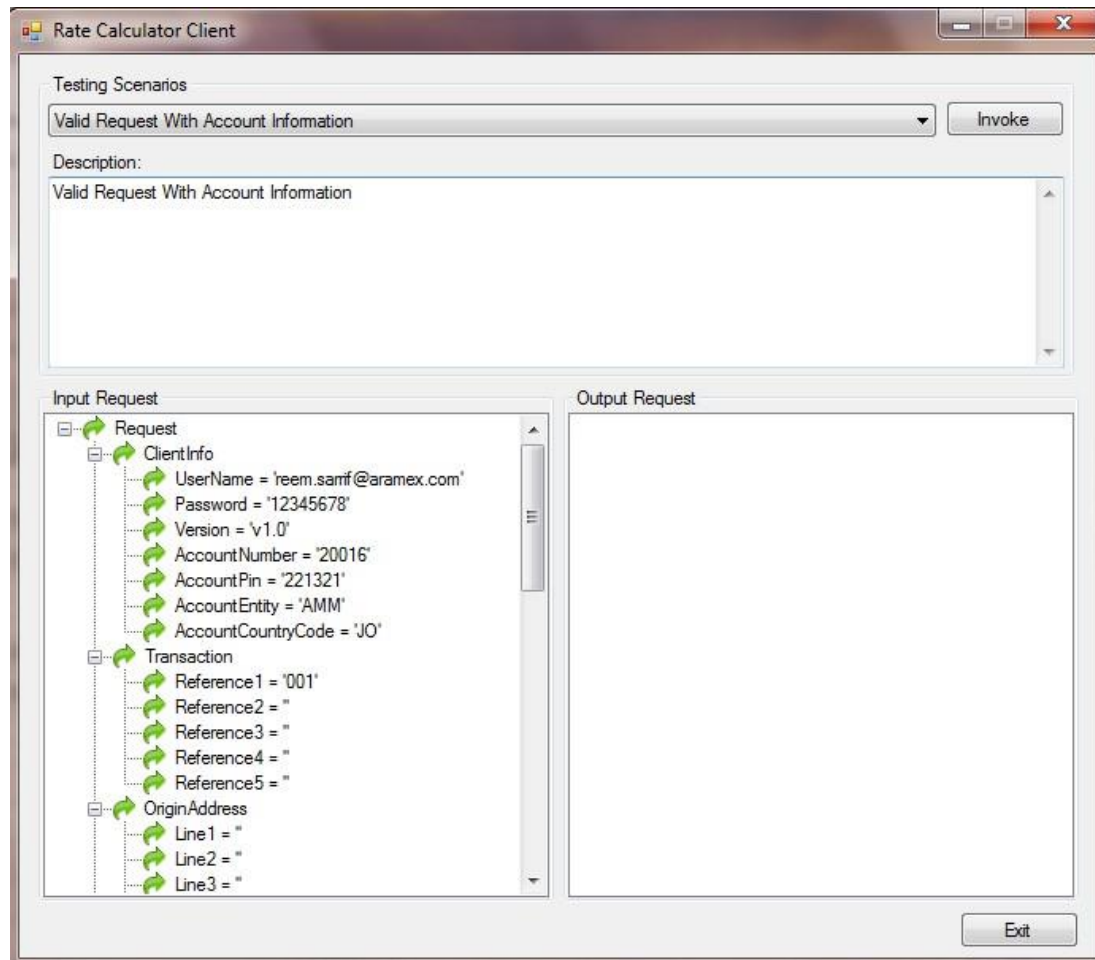

4. Rate Calculator conditions:

The result retrieved from the rate calculator will depend on the following conditions:

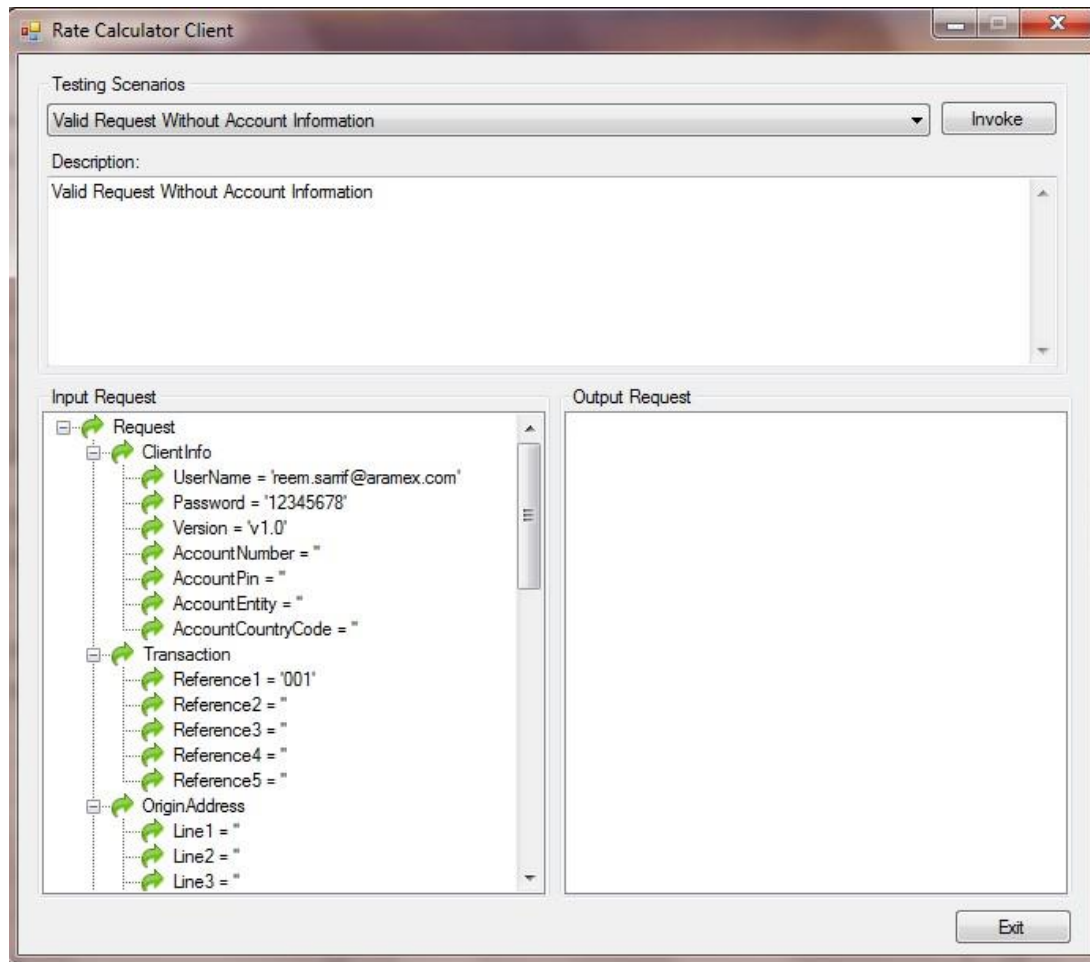

- If the account details are filled, rate is calculated according to that specified in the customer's account.
- If the account details are not filled, rate is calculated according to the public rate of the origin, given that the payment type is P.
- If the account details are not filled, rate is calculated according to the public rate of the destination, given that the payment type is C.

5. Images of the Back-end User Interface

5.1 A Valid Request with Account Information

5.2 A Valid Request without Account Information

APPENDIX: Aramex and General References

Appendix A - Product Types

Product Type	Name	Dutiable	Full Description	Product Group
PDX	Priority Document Express	No	Urgent, time sensitive consignments containing printed matter or document material	International Express
PPX	Priority Parcel Express	Yes	Urgent, time sensitive consignments containing non-printed matter or non-document material	International Express
PLX	Priority Letter Express	No	Urgent, time sensitive consignments containing printed matter of weight less than 0.5 kg	International Express
DDX	Deferred Document Express	No	2nd Day Delivery consignments containing printed matter or document material	International Express
DPX	Deferred Parcel Express	Yes	2nd Day Delivery consignments containing non-printed matter or non-document material	International Express
GDX	Ground Document Express	No	Ground delivery consignments containing printed matter or document material	International Express
GPX	Ground Parcel Express	Yes	Ground Delivery consignments containing non-printed matter or non-document material	International Express

Appendix B - Shipment Payment Methods

Payment Method	Stands for	Description
----------------	------------	-------------

P	Prepaid	Transportation Charges payable by shipper
C	Collect	Transportation Charges payable by consignee
T	Third Party	Transportation Charges payable by third party. Note: in case of 3rd Party all third party details must be filled including a valid Aramex Account Number for Billing Party.

Appendix C - Service Codes

Service Code	Description	Full Description
COD	Cash on Delivery	Receiver pays the cost of the goods
FIRST	First Delivery	Committed delivery time at destination country.
FRDOM	Free Domicile	Sender pays part/or all of the customs charges and the receiver consignee doesn't pay anything of the shipping or handling charges.
HFPU	Hold for pick up	Receiver picks up the consignment from an Aramex/Partner facility
NOON	Noon Delivery	Committed delivery time BEFORE Noon at destination country.
SIG	Signature Required	Physical receiver signature required upon delivery

Appendix F - Error Codes and Messages

Error Code	Error Message
Missing Parameter Error	ClientInfo is empty
Missing Parameter Error	OriginAddress is empty
Missing Parameter Error	DestinationAddress is empty
Missing Parameter Error	ShipmentDetails is empty
ClientInfo - UserName Missing Value Error	UserName is empty
ClientInfo - Password Missing Value Error	Password is empty
ClientInfo - Version Missing Value Error	Version is empty
ClientInfo - AccountNumber Missing Value Error	AccountNumber is empty
ClientInfo - AccountPin Missing Value Error	AccountPin is empty
ClientInfo - AccountEntity Missing Value Error	AccountEntity is empty
ClientInfo - AccountCountryCode Missing Value Error	AccountCountryCode is empty
ClientInfo - Login Error	Invalid username or password
ClientInfo - Account Error	Invalid account information
ClientInfo - Account Error	Account is blocked
OriginAddress - City Missing Value Error	City is empty
OriginAddress - CountryCode Missing Value Error	CountryCode is empty
DestinationAddress - City Missing Value Error	City is empty
DestinationAddress - CountryCode Missing Value Error	CountryCode is empty
ShipmentDetails - NumberOfPieces Missing Value Error	NumberOfPieces is less or equal zero
ShipmentDetails - ActualWeight Missing Value Error	ActualWeight is empty
ActualWeight - Value Missing Value Error	Value is less or equal zero
ActualWeight - Unit Missing Value Error	Unit is empty
ActualWeight - Unit Invalid Value Error	Unit is invalid
ChargeableWeight - Unit Missing Value Error	Unit is empty
ChargeableWeight - Unit Invalid Value Error	Unit is invalid
